

## WHERE IS THE FAULT ? ECFL30 GIVES THE ANSWER !

### FOUR INSTRUMENTS IN ONE

- **Active Bridge** for accurate location of faults where the level of disturbing voltages are low
- **Passive Wheatstone Bridge** for location of faults where the level of disturbing voltages are high
- **Graaf Fault Locator** for accurate fault location on totally water-soaked cable where the disturbing voltages are usually high and intermittent
- **TDR** to find low impedance faults and splits causing cross talk between the pairs. Manual and Automatic configuration provided

### APPLICATIONS AND FEATURES

The **CABLE FAULT LOCATOR ECFL 30** hand-held instrument is intended to test the quality of telecom cables and to locate cable faults. That combined instrument provides several tools for the accurate location of DC/AC faults on the line:

#### Resistance Measurements

- Loop resistance
- Resistance difference
- Insulation resistance

#### Capacitance Measurements

- Cable capacitance
- Capacitive balance

#### DC Fault Location Methods

- Murray
- 3 Point
- Küpfmüller
- Repeated Küpfmüller

#### AC Fault Location Methods

- Interruption
- Repeated Küpfmüller

#### Graaf Fault Location Method

- End to end Master-Slave measurement
- Fault location on totally water-soaked cable

#### TDR Measurements

- Single pair
- Double Pair Measurements
- XTALK
- Comparison to Memory

#### AC-DC Voltage measurements

#### Cable temperature measurement

#### Extremely Simple Operation

- Easy to use menu system
- Many-sided topic oriented help system
- Large Graphic Display with Backlight

Operation is made extremely comfortable by means of pre-defined automatic test sequences:

#### Automatic Test Sequences

- Cable State Survey to find the best test method
- Quick Test of main parameters
- Quality Test Sequence

#### USB Ports for Result Transfer

- USB B device-port for direct PC connection
- USB A host-port for USB stick (Indirect transfer)

The indirect transfer is advantageous for the user who does not have administrative right to install a special driver to his PC.

ECFL 30 is suitable for the remote control of loop closing devices on the far end. Utilizing that feature just one person can perform measurements during which the far endings of the tested pair should be opened or closed (e.g Küpfmüller method).

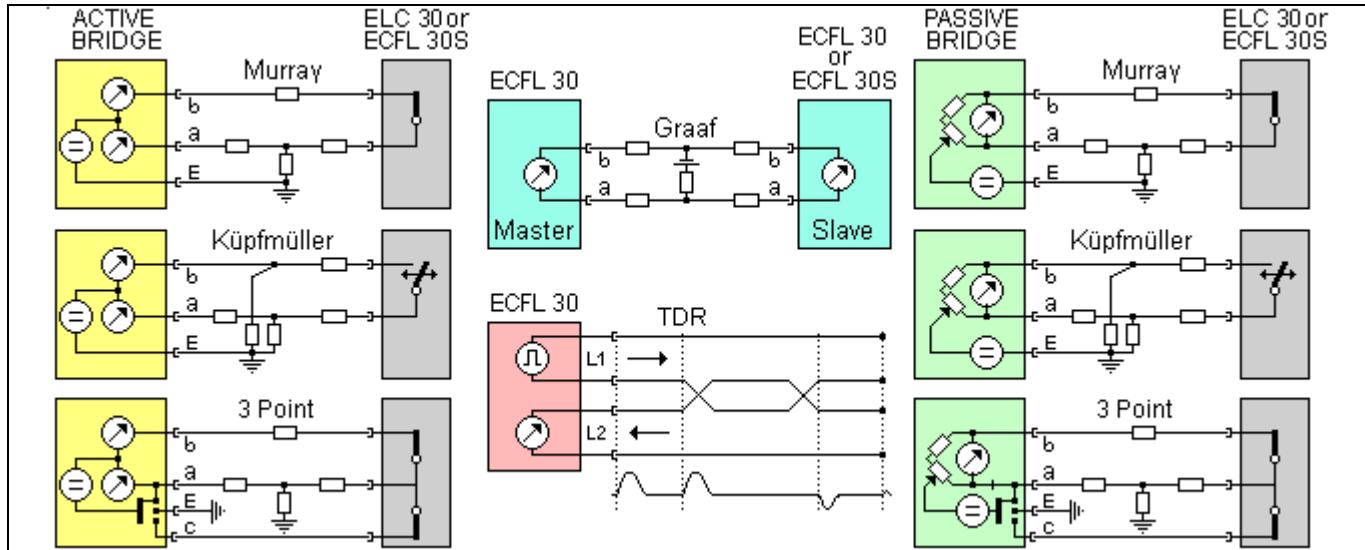

#### Remote Controllable Far end Devices

- ELC 30 loop closing device to open or close the far end of the tested cable
- ECFL 30S slave unit to perform synchronic end to end Graaf measurement and open or close the far end of the tested cable.

#### Single End Line Test (SW option)

- Loss and data transfer speed estimation
